

Fig. 1 is a top-down view of a circular device. It features several concentric rings. The outermost ring has a textured, possibly serrated or grooved, outer edge. Inside this is a smooth ring, followed by another textured ring, and then a central smooth circle. A horizontal dashed line and a vertical dashed line intersect at the center, forming a crosshair. A diagonal dashed line, labeled 'A-A' at both ends, passes through the center. Another dashed line, labeled 'B-B' at both ends, is tangent to the outer edge of the device. At the top center, there is a small, detailed view of a component, possibly a valve or a connector, which is partially enclosed by a dashed semi-circle.
